## What were the Fund costs for the last year? *(based on a hypothetical \$10,000 investment)*

Class Name	Costs of a \$10,000 investment	Costs paid as a percentage of a \$10,000 investment
Class A	\$67	0.65%

## How did the Fund perform last year and what affected its performance?

For the fiscal year ended July 31, 2024, the Fund returned 6.80%, reflecting performance at the net asset value (NAV) of Class A shares with all distributions reinvested, compared to a securities market index with investment characteristics similar to those of the Fund, the ICE BofA Green Bond Index (USD Hedged), which returned 7.81% over the same period. The Fund's broad-based market index, the Bloomberg Aggregate Bond Index, returned 5.10% over the same period.

Positive factors for the markets included momentum around the soft-landing narrative, specifically in the second half of the period, which was supported by signs of a cooling labor market and a slowing economy, leading the market to adjust its expectations of future interest rate cuts by the U.S. Federal Reserve (the Fed). Negative factors, specifically in the beginning of the period, included stronger-than-expected GDP growth, resilient labor market data, and persistently high inflation readings that led to a more prolonged interest rate environment.

**Top contributors to performance:** The Fund's allocation to high yield corporate bonds was one of the largest contributors to relative performance.

**Top detractors from performance:** The Fund's overweight allocation to commercial mortgage-backed securities detracted from relative performance.

## Fund Performance

Total Return Based on \$10,000 Investment

The Fund's benchmarks are unmanaged indices used as a general measure of market performance. Calculations assume the reinvestment of dividends and capital gains.
